

Web pages and social media

NCapture is a browser extension that lets you clip web pages and import them as PDF sources into your NVivo project.

The diagram illustrates the process of saving a web page as an NCapture file and then importing it as a PDF source into NVivo. On the left, a browser window shows a web page titled "The Economic Consequences of Environmental Change" with a sign that says "DO NOT HARVEST MUSSELS CLAMS". Below the browser window, the text reads "Save a web page as an NCapture file". An orange arrow points from the browser to the NVivo software interface on the right. The NVivo interface shows a project named "Sample Project" with a table of sources. Below the NVivo interface, the text reads "Import it as a PDF source".

NCapture also enables you to capture social media conversations (from Facebook or Twitter)—and store them as PDF or dataset sources. Having content in a dataset means you can auto code—for example, you could gather Tweets by hashtag or location.

ID	Username	Tweet	Hashtags	Location	Number of Tweets	Number of Followers
2	Water_Angel	Everyday when I wake up to the views of Cape Lookout I thank my lucky stars that I live in #CarteretCounty	CarteretCounty	Sea Level, NC	3,200	112
3	FerrymanOf72	@Frank_B_Fishn. I agree it's over for #shrimp in #CarteretCounty 90% of the shrimp comes from Vietnam, Thailand and South America we can't compete	shrimp CarteretCounty	Straits, NC	743	69
4	WaveJump4	@Frank_B_Fishn. It's a natural cycle, some years are good for #shrimp some years not so good. I've been in #CarteretCounty for 20 years.	shrimp CarteretCounty	Smyrna, NC	325	21
5	WaveJump4	@Frank_B_Fishn. I don't think there's a problem with #shrimp in #CarteretCounty Just look back two years ago - biggest harvest I've	shrimp CarteretCounty	Smyrna, NC	324	21
