

Bring it all together with queries

You can use NVivo queries to:

- Find and analyze the words or phrases in your sources, theme nodes, cases and relationships. You can find specific words or those that occur most frequently.
- Ask questions and find patterns based on your coding, check for coding consistency among team members and review your progress.

You can work with queries using the **Query** tab:

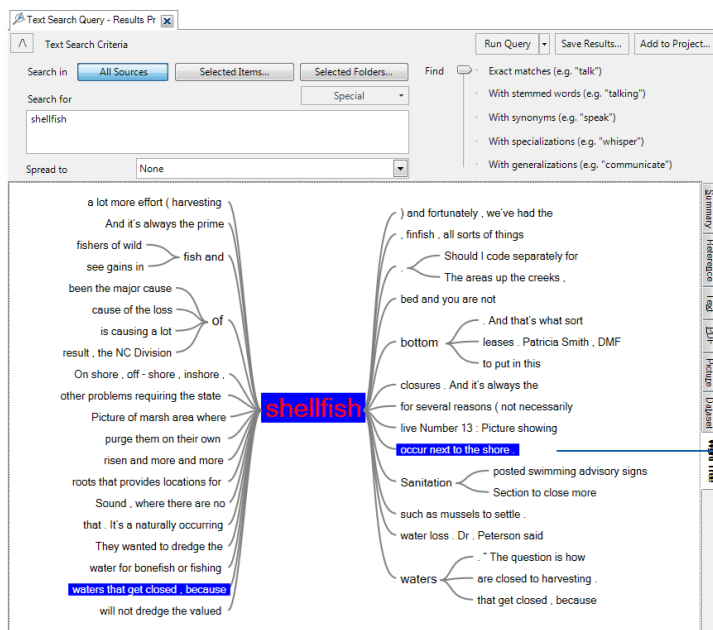

Easily create queries using the step-by-step Query Wizard

Use queries for text analysis

You can explore the text in your sources using the following queries:

- **Text Search Query:** search for a word or phrase in your source material and view all the matches in a preview node—automatically code the content (if you want to). Display a word tree to visualize words in context:

Display results in a word tree, click a branch to highlight the context

- **Word Frequency Query:** list the most frequently occurring words in your sources and visualize the results in a word cloud, tree map or cluster analysis diagram:

Display results in a word cloud
Double-click a word to view all occurrences

Use queries to explore your coding

You can review and explore your coding using:

- **Coding Query:** gathers all the coding at any combination of nodes—for example, gather and explore all content coded at *water quality* and *tourism*, or find where content coded at *water quality* is near content coded at *tourism*.
- **Matrix Coding Query:** creates a matrix of nodes based on search criteria. For example, show me attitudes about *water quality* by *community*.
- **Coding Comparison Query:** compares the coding of two researchers or two groups of researchers. This is useful for teams who are interested in coding consistency and the questions posed by researcher disagreement.
- **Compound Query:** combines text and coding queries—search for specified text in or near coded content.
- **Group Query:** finds items that are associated in a particular way with other items in your project. For example, list the theme nodes that code a selection of sources.
